# THE BLUEPRINT

## 7-Day AI Influencer Viral Launch Guide

From zero to your first viral post. In one week.

OVERVIEW

# What's Inside

This isn't a theory guide. Every step in this document is a direct action you take on a specific day. By the end of Day 7 you'll have a live AI influencer account, a content system that finds viral material automatically, and a monetization setup ready to generate income, all before you ever hit 10,000 followers.

✓ **FOUNDATION**
How to find your niche and build your AI model from scratch.

✓ **ACCOUNT WARM-UP**
The exact launch sequence that gets you out of "300 views jail" fast.

✓ **GOLDMINE CONTENT**
Find proven viral content and recreate it with your AI character. This alone is worth 10x the price.

✓ **AI CREATION**
The full automation workflow for producing content at scale.

✓ **ALGO MASTERY**
The real metrics platforms actually measure, and how to engineer every one of them.

✓ **GETTING PAID**
Step-by-step Fanvue setup to hit $1,500+/month before you reach 10,000 followers.

**■ BONUS INCLUDED**

AI Influencer Realism Pack: the prompts, presets, and techniques that make AI content look indistinguishable from real.

| **DAY 7** | Getting Paid: Fanvue Setup & Monetization |
| **BONUS** | Bonus Resources |

# DAY 1

DAY 1 · FOUNDATION

## Pick Your Niche

*The single most important decision you'll make. Get this right and everything else becomes easier.*

## Why Niche Selection is Everything

Most people skip this step and then wonder why their account never takes off. Your niche determines your audience, your content style, your monetization ceiling, and how fast the algorithm pushes your content. You're not picking a topic. You're picking a character that a specific group of people will obsess over.

## The Most Popular & Proven Niches

**MOST POPULAR NICHES**

- Gamer Girl
- MILF
- Foot Fetish
- Trans
- Athletic
- Girl Next Door
- Cosplay
- Findom
- Couples

**PHYSICAL CHARACTERISTICS**

- Big boobs
- Small boobs
- BBW
- Athletic build
- Girl next door
- Big ass
- Nerdy

**ETHNICITY**

- Asian
- Black
- White
- Hispanic
- Indian

**OCCUPATIONS & INTERESTS**

- Teacher
- Student
- Cooking
- Gaming
- Sports
- Money
- Cars
- Motorbikes
- Military

**PRO TIP**

The strongest niches combine a physical type + an interest. Example: Athletic Black gamer girl. That specificity makes the algorithm's job easy because it knows exactly who to show your content to.

## How to Choose YOUR Niche

Ask yourself three questions before committing:

- Is there already a proven audience for this? (Search the niche on TikTok/IG, and if there are accounts with 100k+, the audience exists.)
- Can you generate consistent, high-quality AI imagery in this niche? (Test 5–10 images before committing.)
- Does this niche have clear monetization pathways? (Fanvue, brand deals, subscription content.)

# DAY 2

DAY 2 · BUILD YOUR AI MODEL

## Build Your DNA File

*Your AI character is a digital asset. Build it once, use it forever.*

## What is a DNA File?

Your DNA File is the master document that defines your AI character. Every image you generate starts here. It has three things: your character's niche positioning, her physical characteristics written as a reusable prompt anchor, and a reference image that locks in her visual identity. Without this, your character will look different in every post and you'll never build a recognizable brand.

## Your DNA File Has 3 Parts

**01** **NICHE**
One sentence that defines who she is and who she's for. Example: "Athletic Black gamer girl, for men who like confident, competitive women with bodies."

**02** **CHARACTERISTICS + STORY**
Your full prompt anchor string. Name, age, physical description, signature details, vibe. This gets pasted into every single prompt you write. Consistency is the entire point.

**03** **REFERENCE IMAGE**
Generate 10–15 images and pick the single best one. This is her "face." Use it as a reference image in HiggsField for every future generation.

## Build Your Swipe File

A swipe file is your personal library of proven content to recreate. This isn't plagiarism. It's market research. Every successful creator has one. You're studying what already works and using it as a blueprint for your own original content.

**What to collect:**

- Carousel posts in your niche with 10,000+ saves on Instagram
- Reels in your niche with 100,000+ views on TikTok
- Video concepts for YouTube Shorts
- Caption styles and hooks that generated massive comment activity

■ **PRO TIP**

Use TikTok's search function. Search your niche + filter by "Most Liked" this month. The top 10 results are your first 10 pieces of content. Save them all.

# DAY 3

DAY 3 · ACCOUNT WARM-UP

## The Launch Sequence

*The difference between 300 views and 30,000 views is how you launch.*

## Why 90% of New Accounts Get Stuck at 300 Views

Every new account goes through a probationary period. The algorithm gives you a tiny initial distribution to test your content quality. If early engagement is low, it stops pushing your content. Most people post and wait, and that's the wrong move. You need to show the algorithm exactly what your account is about before it'll trust you with real distribution.

## The Warm-Up Protocol

→ **CREATE FROM OLD ACCOUNT CENTER**
If you've got an existing account, create your new one from within your old account's settings. It gives your new account instant credibility because it inherits trust signals from your existing profile.

→ **ENGAGE 3 TIMES PER DAY**
Morning, lunch, and afternoon. 15 minutes each session. Like, comment, and follow accounts in your exact niche. You're teaching the algorithm what your account is about through your behavior, not just your content.

→ **IDENTIFY YOUR OUTLIERS**
After your first 5–7 posts, check your analytics. One or two posts will significantly outperform the others. Those are your outliers, and the algorithm is telling you what it wants to push.

→ **DOUBLE DOWN AND KILL WHAT'S NOT WORKING**
Once something starts to work, make 5 more posts in the exact same format, same hook style, same visual energy. Ruthlessly cut anything that consistently underperforms.

■ **PRO TIP**

The Holy Grail signal: when your average watch time starts climbing while your skip rate drops. That combination tells the algorithm your content is worth pushing to cold audiences.

# DAY 4

DAY 4 · GOLDMINE CONTENT

## Find & Recreate What Works

*Stop guessing. Let proven viral content tell you exactly what to make.*

### The Goldmine Method

The fastest path to viral isn't inventing new content formats. It's finding content that already went viral in your niche and recreating it with your AI character. The concept has already been proven. You're just delivering it with better visual execution.

### Step 1: Find Proven Viral Content

- Search your niche on TikTok and filter by Most Liked, last 30 days.
- Look for videos with 500K+ views that have under 100K followers on the account (high viral coefficient).
- Save the top 10 into your swipe file. Note the hook (first 2 seconds), the format, and the caption.
- Do the same on Instagram Reels: search hashtags in your niche, sort by recent, and filter for 50K+ likes.

### Step 2: Recreate With Your AI Character

You're not copying the content. You're copying the concept. The hook, the format, the emotional trigger. Your version will look completely different because it features your unique AI character in your signature visual style.

- Identify the core concept: what made the original video work? (Curiosity? Desire? Humor? Shock?)
- Recreate the hook word-for-word, then change everything else to fit your character.
- Generate 3–5 image variations using your DNA File anchor string + the scene from the original.
- Post at the same time of day the original was posted, as algorithm activity patterns repeat.

**■ PRO TIP**

The best goldmine content has high saves relative to likes. Saves signal that people want to come back to it, and the algorithm treats saves as the highest-value engagement signal.

# DAY 5

DAY 5 · AI CREATION

## Full Automation Workflow

*Build a system that produces content faster than any human creator.*

## The Automation Stack

By Day 5 you've got a character, a swipe file, and a warm account. Now you build the production system. The goal is to batch-produce 7–14 days of content in a single session so you're never scrambling for posts.

## The Weekly Production System

→ **MONDAY: PLANNING**
Review your swipe file. Pick 7 proven concepts. Write 7 hooks. This is your week's content calendar.

→ **TUESDAY: GENERATION**
Open HiggsField. Generate 3–5 image variations for each concept using your DNA anchor string. You should produce 20–35 images in a single session. Keep only the best 7–10.

→ **WEDNESDAY: EDITING & CAPTIONING**
Write captions using the hook from your swipe file research. Add relevant hashtags. Schedule all posts through your platform's scheduling tool or a third-party scheduler.

→ **THURSDAY TO SUNDAY: ENGAGE & ANALYZE**
Spend 15 minutes, 3x per day engaging in your niche. On Sunday, review the week's analytics and identify your outliers. These become next week's content direction.

**■ PRO TIP**

Batch everything. Never create content one post at a time. The mindset shift from "what do I post today" to "I have 14 posts ready" changes everything about your consistency.

# DAY 6

DAY 6 · ALGO MASTERY

## Engineer Every Metric

*The platforms tell you exactly what they reward. Most creators ignore it.*

### What the Algorithm Actually Measures

Every major platform uses the same core signals to decide whether to push your content. Understanding these signals is the difference between hoping your content goes viral and actually engineering it to. None of this is a secret. The platforms publish it openly. Almost nobody acts on it.

→ **WATCH TIME / AVERAGE VIEW DURATION**
The single most important metric. If people watch 80% of your video, the algorithm pushes it hard. Engineer this by front-loading the most compelling visual in the first 0.5 seconds and ending on a hook that makes people want to rewatch.

→ **SKIP RATE**
The inverse of watch time. A skip rate below 30% is exceptional. Study your best-performing posts and identify what made people stay. Replicate that element in every new post.

→ **SAVES**
The highest-value engagement signal on Instagram. A save tells the algorithm the content has long-term value. Design posts that people want to come back to, like tutorials, references, content that answers a question.

→ **SHARES**
Shares = distribution. Every share puts your content in front of a cold audience for free. Content gets shared when it creates a strong emotional reaction: desire, humor, shock, or deep relatability.

→ **COMMENTS**
Comments signal debate and discussion. The algorithm favors posts that generate back-and-forth. Ask direct questions in your captions. Create content that has a clear opinion people can react to.

→ **PROFILE VISITS**
High profile visits after a post means your content made people curious about who you are. This is how viral posts convert to followers. Your profile needs to immediately communicate who you are and why they should follow.

# DAY 7

DAY 7 · GETTING PAID

## Fanvue Setup & Monetization

*Hit $1,500+/month before you reach 10,000 followers.*

## Setting Up Fanvue

Fanvue is the go-to monetization platform for AI influencers. Unlike OnlyFans, Fanvue actively supports and promotes AI creators. They've got dedicated tools for digital characters and a growing audience specifically looking for AI content. Set this up on Day 7 so you're ready to convert followers from Day 1.

## Setup Checklist

- ✓ **Create your Fanvue account**
  Use your character's name and brand. Keep it consistent with your social profiles.
- ✓ **Set your subscription price**
  Start at $9.99/month. Lower than this undervalues your content; higher loses conversions at small following sizes.
- ✓ **Create your first 5 pieces of content**
  NSFW or GF-experience content. This is what converts free followers to paying subscribers.
- ✓ **Set up your link in bio**
  Your Fanvue link goes in every bio across every platform. No exceptions.
- ✓ **Create provocative story posts**
  Use IG/TikTok stories to tease subscriber-only content. Stories drive the highest conversion rate.

**■ AVOID THIS**

Things to avoid to prevent getting banned: • Use language like 'Digital Character' or 'AI Model' in your bio, as platforms are more lenient with AI creators who are transparent. • Always add AI disclosure under posts, as this protects you legally and keeps platforms happy. • Create a second Instagram account as a backup and put your Fanvue link in that bio too. If your main account gets restricted, you still have a monetization path.

## The $1,500/Month Math

At $9.99/month: you need 150 paying subscribers. With a 2% conversion rate from free followers to paid (industry standard), that means 7,500 engaged followers to hit this number. With the Goldmine Content method

and proper algorithm engineering, 7,500 followers is very doable within 4–6 weeks of consistent posting.

**PRO TIP**

Don't wait until you have a big following to set up Fanvue. Set it up today. Every follower you gain before it's live is a conversion you already lost.

BONUS

# Bonus Resources

Everything below is included with your copy of The Blueprint. Use these alongside the 7-day guide to speed things up.

→ **Re-Create Any Viral Video: Weavy Workflow Template**
A ready-to-run automation workflow that helps you find and recreate viral video content with your AI character. Open the link, duplicate the flow, and follow the steps inside.

https://app.weavy.ai/flow/ONclO66EC1lwXGUIZJBheA

→ **The Ultimate Guide To Photorealistic AI Visuals (PDF)**
The complete AI Influencer Blueprint prompting guide. Master the 10-Layer Prompt System, build your AI character, and learn the exact techniques that make AI imagery indistinguishable from real photography. Included in your purchase.
